GENERAL NOTES

GENERAL

1. All construction and workmanship shall conform to the 1976 Uniform Building Code.

2. These notes shall be used in conjunction with the plans and any discrepancies shall be brought to the attention of the Architect/Engineer.

3. Contractor must check all dimensions, framing conditions, and site conditions before starting work. Architect/Engineer shall be notified immediately of any discrepancies or possible deficiencies.

4. Conditions not specifically shown shall be constructed similar to the details for the respective materials.

5. The drawings and specifications represent the finished structure. All bracing, temporary supports, shoring, etc. is the sole responsibility of the Contractor. Observation visits to the job site by the Architect/Engineer do not include inspection of construction procedures. The Contractor is solely responsible for all construction methods and for safety conditions at the worksite. These visits shall not be construed as continuous and detailed inspections.

6. Design, materials, equipment and products other than those described below or indicated on the drawings may be considered for use, provided prior approval is obtained from the Owner, Architect/Engineer, and the applicable governing code authority.

7. All conditions noted as existing are based on the best information currently available at the time of preparation of these drawings. The Contractor is to verify all conditions before starting work. Should conditions arise which are different from those shown on the drawings, the Architect/Engineer shall be notified immediately and additional drawings based on more accurate information will be prepared.

TEST AND INSPECTIONS

1. Continuous inspection shall be provided by a Testing Laboratory for all field welding and concrete with specified compressive strength of 2500 psi or greater.

FOUNDATIONS

1. All existing fill soil and disturbed natural soils are to be excavated and replaced with properly compacted fill. All filling, backfilling, recompaction, etc. is to be accomplished only under the supervision of a Soils Engineer.

2. All excavations are to be inspected and approved by a Soils Engineer prior to the placement of any concrete or reinforcing steel.

3. Footings are to be carried a minimum of 1'-0" (1'-6" at two story conditions) into firm undisturbed natural soil or approved compacted fill.

4. Design bearing pressure is 1000 psf with a 33% increase for seismic or wind loading.
