Grease blockages can cause sewer backups, threatening the environment, damaging property and causing health hazards. Pharmaceuticals can pass through wastewater treatment systems and contaminate local waterways.

Always dispose of pharmaceuticals and grease in the trash. Mix pharmaceuticals with an undesirable substance such as kitty litter and place in a sealed container. Pour cooled oil and grease into a can and dispose of in the trash.

Maintain your home sewer line. Periodic cleaning is essential to keep household waste flowing.

For more information contact the Public Works Department at 826-5311 or RiversideCa.gov/sewer
