

❖ **STATEMENT OF COMPLIANCE** ❖  
(Moisture Content of Lumber)

The California Green Building Standards Code requires that the individual responsible for the construction of newly constructed low-rise residential buildings verify that the wood framing members used do not exceed 19% moisture content.

**Please review the following and submit this completed form to your City of Riverside Building Inspector prior to the framing inspection.**

***I have verified that the moisture content of framing members within the building identified on this form does not exceed 19%. Verification has been performed as follows:***

- 1) A probe-type or contact-type moisture meter was used to verify the moisture content of the lumber in the building.
- 2) At least three random moisture readings were performed on wall and floor framing members.
- 3) Moisture readings were taken at a point 2 feet to 4 feet from the grade stamped end of each piece to be verified.

By my signature, I acknowledge that I have read and that I understand the statements above and the requirements of California Green Building Standards Code.
